Lab 2 report

Felix Sjöqvist and Olle Olofsson

April 28

1   report:

- give an overview of the the client-server programa

- describe how it works (at the high level, textual)

- show how to use the program

- provide the output from stdout/debug information, e.g., redirect the output to a file or screenshot

2   code

- be well commented on important functions and lines of code (undocumented code will not be approved)

- include meta-data on each file, such as program name, author, general description

- answer the question why and now how the program works (the code itself often explains how something is done)
